Reviewer's report

Title: Acute clouding of trifocal lens during implantation: a case report

Version: 0 Date: 09 Aug 2017

Reviewer: Ceyhun Arici

Reviewer's report:

The authors studied a case about acute opacification of trifocal lens intraoperatively.

Trifocal lenses have been increasingly used recent technological lenses and have high cost. Therefore, change of transparency during implantation can make contribution on literature. Whereas, due to high cost of trifocal lenses, same dioptic power of lenses may not present in theater during surgery. So, disappearance of opacification may have been present after an hour. Different case reports were present about opacification of foldable hydrophilic acrylic IOLs and acrylic hydrophobic IOL during surgery and improvement of opacification were detected after ≥3 hours. The authors should mention that disappearance of opacification may have been present after an hour.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
