Reviewer’s report

Title: Vitreous Hemorrhage and Rhegmatogenous Retinal Detachment that Developed after Botulinum Toxin Injection to the Extraocular Muscle: Case Report

Version: 0 Date: 03 Aug 2017

Reviewer: Niranjan Pehere

Reviewer's report:

Dear authors:

Thanks for submitting your work. I have a few queries:

1. The decision to give botox after 6 months of observation looks controversial. Generally botox is given in early phase. Later fibrosis sets in and both may not be effective.

2. As a part of surgery for the RD, what intravitreal bevacizumab was given?

3. Was macula on or off when RD was noticed?

4. Poor English- page 4, line 31-32

5. Gap of 19 weeks following botox inj and RD surgery is too long.

6. We need details of where was the retinal break

7. You need to discuss possible reasons for the scleral perforation and ways to avoid it. thats the key message of the case report.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
