Reviewer’s report

Title: Occipital lobe infarction: a rare presentation of bilateral giant cavernous carotid aneurysms: a case report

Version: 0 Date: 14 Dec 2017

Reviewer: Thomas Siempis

Reviewer's report:

This is a very interesting case report of a rare condition and potentially life threatening condition with neuroophthalmic signs and symptoms.

The authors have done a good job of describing the case and complimenting it with the relative visual fields, ophthalmic eye movements and MRI images.

The article needs some minor grammatical corrections but overall, I would recommend its publication to increase the awareness of CCAs as a differential diagnosis for cranial nerve palsies of the III, IV and V cranial nerves.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
