Title: Earliella scabrosa-associated Postoperative Endophthalmitis after Phacoemulsification with Intraocular Lens Implantation: a Case Report

Version: 1 Date: 15 Dec 2017

Reviewer: Sang-Mok Lee

Reviewer’s report:

All comments were well addressed. The manuscript provides more detailed information which can be helpful to the readers including clinical courses and reviews after revision. However, language editing is probably needed. And it could be better if you can add reference for "On the contrary, the vitreous of the eye can, to some extent, restrict the dissemination of a pathogen because it contains no blood vessels and is a poor nutritional source for invading agents." on page 9 line 24-29.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
