Reviewer’s report

Title: The treatment of malignant glaucoma in nanophthalmos: a case report

Version: 1 Date: 14 Dec 2017

Reviewer: Hui-Ju Lin

Reviewer's report:

Nanophthalmos is difficult to handle and glaucoma is often noted in these patients.

This paper suggested that peripheral capsulotomy laser treatment is effective in controlling IOP after cataract surgery in nanaophthalmos patients.

This is an interesting case but this a not a novel method and is not difficult to approach the treatment.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
