I found this paper an interesting and novel twist on a "tried and true" technique with good data to support the surgical technique. It is overall very "readable" but I would consider editing a bit of the methods in both the abstract and the manuscript, moving the demographics and any "data" that section to the results. More specifically, in the methods, I would recommend focusing on how the study was constructed and what was done rather than including demographics such as mean patient age, which would fit better in the results. Please update the abstract as well as consider moving the demographics in lines 90-91 of the manuscript to the results.

Thank you for the opportunity to review this manuscript.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Unable to assess
Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
I am able to assess the statistics
