Reviewer's report

Title: LONG-TERM VISUAL OUTCOMES AND REHABILITATION IN USHER SYNDROME TYPE II AFTER RETINAL IMPLANT ARGUS II.

Version: 2 Date: 22 Apr 2018

Reviewer: Un Chul Park

Reviewer's report:
The authors have addressed most of my points.

However, in Figure 3 which was added in this revision in response to the comment by reviewer 2, electrode array is not in close contact with the inner retinal surface except at both edges of array raising suspicion that it couldn't work properly at this status. The OCT images of patients who received Argus II prosthesis show better contact with inner retina in other case reports, and I wonder postoperative calibration of each electrode's threshold was performed to overcome this problem as Rizzo et al reported (Am J Ophthalmol 2014;157:1282-90). I think reviewer 2 would give more rational assessment for this issue.

Minor point:
I have found one grammatical error.
- page 4, line 9-11, his successfully rehabilitation --> his successful rehabilitation

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Unable to assess
Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
Not relevant to this manuscript

Quality of written English
