1. Though it was hard to tell the correlation between the intravitreal injection of ranibizumab and HHV-6 infection as the patient himself had bullous pemphigoid history and received systemic steroid treatments, the case report gave clear presentation of HHV-6 corneal endothelitis diagnostic though which was meaningful for clinicians. Just one question, please add the baseline of endothelial cells condition and EDCs after anti-virus treatment.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
