Reviewer's report:

General Comments:

The paper entitled "The effects of different shapes of capsulorrhexis on postoperative refractive outcomes and effective position of the intraocular lens in cataract surgery (BOPH-D-18-00922)" by Shixu Li1 et al, has a potential to be accepted, but some important points have to be revised or fixed before the publication. I here summarize these points.

Comment 1.

In the "methods Section", were the patients randomly grouped? What kind of random method was used?

Comment 2.

What was the spherical aberration of the two intraocular lenses? Did the author consider the spherical aberration of the cornea when implanting different intraocular lenses?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
