Reviewer’s report

Title: Choroidal neovascularization emerged right from the focal choroidal excavation in eyes with central serous chorioretinopathy post half-dose photodynamic therapy: A case report

Version: 2 Date: 26 Dec 2018

Reviewer: Michael Paul Blair

Reviewer's report:

The authors present 2 interesting cases of CNV developing from FCE after PDT for CSCR. Given limited number of cases no strong conclusions can be reached.

They should discuss that PDT is known to increase VEGF transiently and therefore perhaps antiVEGF could be given the week or a few days before PDT to reduce the chance of this complication.

Also Figure 2 legend does not reference panel g.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
