Reviewer’s report

Title: Rotation of a toric intraocular lens with and without capsular tension ring: data from a multicenter non-inferiority randomized clinical trial (RCT)

Version: 0  Date: 12 Oct 2018

Reviewer: Jacqueline Busingye

Reviewer's report:

I think this is paper tackles a very interesting topic needing further evaluation. It's important that patient's paying extra for toxic IOLs have the best chance at achieving their best visual acuity. The biggest limitations are the study pool, the limited documentation especially with pictures and also loss of clinical information. The fact that five of the seven data sets with need for corrective surgery did not contain details on rotation is very problematic and a central piece of information.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
