Reviewer’s report

Title: Prospective comparative study of tolerance to refractive errors after implantation of extended depth of focus and monofocal intraocular lenses with identical aspheric platform in Korean population

Version: 1 Date: 16 Jul 2019

Reviewer: Hyung Bin Hwang

Reviewer's report:

The authors present an interesting study summarizing the clinical results in a brief yet comprehensive manner. Postoperative refractive error may considerably undermine the visual quality of the patients and I believe this paper contributes to understanding the optical behavior of the current or upcoming EDOF IOLs that share the same lens platform. I do not have any further points to add to the current post-revision version of the manuscript; as the authors noted, however, further randomized clinical studies with a larger cohort of patients comparing different types of EDOF IOLs may be necessary to determine their superiority in respect to tolerance to residual refractive error.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
