Reviewer’s report

Title: Quadrantic Vortex vein decompression with subretinal fluid drainage for management of Nanoophthalmic choroidal effusions. Review of Literature and case series

Version: 2 Date: 06 Aug 2019

Reviewer: Andreas Ebneter

Reviewer’s report:

This case series describes and presents a nice technique to address a relatively rare pathology. I like the illustrations a lot, and I guess it is important that ophthalmic surgeons know this procedure. There are some grammatical flaws, especially in the introduction that could be corrected to improve the quality of the manuscript, though.

Relating to the surgical technique, as a reader I would like to have additional information only: From external subretinal drainage, the eye would go soft. Do you pressurize the globe during this procedure by injecting BSS into the anterior chamber? What treatment do you prescribe postoperatively?

Thank you.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
