The data provided is based on one or two diagnostic assessments but the title says 'factors'. Since the surgery is done on the subjects, the authors are requested to assess the aqueous and vitreous humour for biochemical and cellular investigations and then see if there are any correlations associated in the study in terms of inflammatory molecules. They could also assess the tear samples pre and post operatively to identify any biomarkers.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
