Reviewer’s report

Title: Improvements in visual acuity and macular morphology following cessation of anti-estrogen drugs in a patient with anti-estrogen maculopathy resembling macular telangiectasia type 2: a pathogenic hypothesis

Version: 0 Date: 16 Jun 2019

Reviewer: Sami Uwaydat

Reviewer's report:

I commend the authors for a well-written manuscript. This is a typical case of tamoxifen maculopathy. The fluorescein angiography is not consistent with the diagnosis of macular telangiectasia. There are very few reports in the literature on toremifene maculopathy or on the effect of stopping anti-estrogen drugs on the retinal morphology of patients with anti-estrogen maculopathy. Hence the value of this report. I suggest changing the title (and the text) to reflect both facts without reference to macular telangiectasia.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript
