Reviewer’s report

Title: Comparison of glaucoma diagnostic ability of ganglion cell-inner plexiform layer according to the range around the fovea

Version: 0 Date: 05 Sep 2019

Reviewer: Vassilios Kozobolis

Reviewer's report:

This is an interesting paper aiming to compare the glaucoma diagnostic ability of the ganglion cell-inner plexiform layer (GCIPL) thickness depending on the range around the fovea using wide-angle Swept-Source OCT (SS-OCT).

There are some limitations of the study noticed already by the authors in the discussion section.

It would be very important to apply this methodology to hypetensive or preperimetric glaucoma cases in order to evaluate the results of GCIPL thickness and specifically the zone 1 as well as in normal tension glaucoma cases.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I recommend additional statistical review
