Title: Outcomes of a Postoperative Perfluorocarbon Liquid Tamponade for Complex Retinal Detachments: 12 Years of Experience in Southern Thailand

Version: 0 Date: 28 Mar 2020

Reviewer's report:

The authors have performed an in-depth analysis of postoperative PFCL for multiple kinds of complex RD, which underwent prior surgery with failure. The manuscript is well written, with clear description and sound methodology. I would like to recommend some language editing of the article, especially the method section. Another issue I would like to know more is the complications caused by postoperative tamponade of PFCL, could you please have more detailed description of it, as it would be the readers concern with.
