Reviewer’s report

Title: Determinants of stunting and severe stunting among Burundian children aged 6-23 months: evidence from a national cross-sectional household survey, 2014.

Version: 1 Date: 08 Apr 2017

Reviewer: SK Sebayang

Reviewer's report:

The manuscript reads much better now. The authors have addressed most of the comments well. However, there are still some minor typos that need correction. Also, I think the discussion part can still be improved.

There is no need to repeat background information and aim of the study in the discussion (line 345-349). The author used WHO conceptual framework (figure 1) as a reference. The discussion can be revised based on the same framework. For example, the analysis found that household/family factors are the dominant determinants, not complementary feeding, breastfeeding nor infection. The framework can also be used to enrich the strength and weaknesses part of the discussion.

Are the methods appropriate and well described?  
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?  
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?  
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?  
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
