Reviewer’s report

Title: Pyogenic spondylitis and paravertebral abscess caused by Salmonella Saintpaul in an immunocompetent 13-year-old child: a case report

Version: 0 Date: 02 Nov 2017

Reviewer: Dae-Chul Jeong

Reviewer's report:

Please include all comments for the authors in this box rather than uploading your report as an attachment. Please only upload as attachments annotated versions of manuscripts, graphs, supporting materials or other aspects of your report which cannot be included in a text format.

Please overwrite this text when adding your comments to the authors.

Thank you for submission of your manuscript.

You consider the following contents with corrections

1. Abstract has too many words. The words in abstract are about 330 words. The author's guideline recommend below 250 words. You have to make corrections within 250 words.

2. You have to consider the description of name of bacteria (change to Italic character).

3. I think that salmonella infection is very rare, but relatively frequent events in immunocompromised state including chronic granulomatous disease, and Sickle cell anemia. So, you described his immune state including immunoglobulin level for exclusion of susceptible state.

4. In discussion, you can describe infection spread according to Salmonella pathogenesis including secondary bacteremia.

5. You have to make corrections for references as guideline of BMC pediatrics. And too many references in this manuscript exist.

6. I describe the another review points in PDF files.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes
Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
