Reviewer's report:

This is a systematic review of the diagnostic accuracy of LAMP in diagnosis of invasive meningococcal disease in children.

For this purpose, authors used just three reports.

One of them included really large number of samples compared to other two reports.

Author's results were dramatically influenced by this one report by Lee et al.

I don't think there is any value on such complex calculations.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
