Reviewer's report

Title: Anthropometric and clinical correlates of fat mass in healthy term infants at 6 months of age.

Version: 0 Date: 28 Sep 2018

Reviewer: Reviewer 2

Reviewer's report:

PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: This is an excellent work performed with a small number of subjects that are part of a cohort group. Nevertheless, the cohort is not explained or cited, and it is impossible to know the criteria for selection of the convenience group of study. Anthropometrics at birth was not correlated with fat mass. It is interesting that the skinfold sum was not described as the best method for the evaluation of FM, as the model shows exactly the same values than TS itself.

ADDITIONAL REQUESTS/SUGGESTIONS: The authors should consider the remarks above on the technical approach of pletismography and the reliable data from skinfold sum.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
Not relevant to this manuscript
