Reviewer’s report

Title: The global prevalence of postpartum psychosis: a systematic review

Version: 0  Date: 01 May 2017

Reviewer: Thomas Berger

Reviewer's report:

This is a well conducted systematic review on the incidence of postpartum psychosis. The presentation is very clear and the methods are described in sufficient detail and as commonly done in systematic reviews so that the study would be reproducible. The review has some limitations but these are mentioned in the discussion/limitations section. Although the review confirms a relatively low rate of postpartum psychosis, this illness and also the study is relevant since postpartum psychosis can have serious consequences. I can only suggest this manuscript for publication.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
