Reviewer's report

Title: A qualitative study of Chinese Canadian fathers' smoking behaviors: Intersecting cultures and masculinities

Version: 2 Date: 23 December 2014

Reviewer: John Wiecha

Reviewer's report:

Overall interesting and relevant study. Underlines the complex web of factors potentially influential. Also, underscores that conventional public health interventions might need to be rethought to target this population. Social engineering (increased cost and restrictions on smoking) once again show their primacy as strategies for reducing smoking.

Minor revisions needed:
please include some demographic information (description/data about numbers of Chinese (males/females) in Canada, and US and immigration numbers/trends) as many of these factors are likely applicable to Chinese males populations in both countries.

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
