Reviewer's report

Title: Development and feasibility study of very brief interventions for physical activity in primary care

Version: 2 Date: 10 February 2015

Reviewer: Geert Rutten

Reviewer's report:

10 February 2015

Re-review: Development and feasibility study of very brief interventions for physical activity in primary care.

I thank the authors for their effort on the adjustment of the manuscript. I have only one Discretionary Revision left:

CONCLUSION

1 - Given all the work the authors have done, the conclusion they draw is too superficial and is not a sound reflection of the findings. The study provides more interesting information than only the fact that four VBIs were acceptable and feasible.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I declare that I have no competing interests.
