Reviewer’s report

Title: Prevalence of cardiovascular disease risk factors among a Nigerian adult population: implication of income level and accessibility to CVD risks screening

Version: 2 Date: 20 February 2015

Reviewer: Belaineh Girma

Reviewer’s report:

Major Compulsory revision
1. Design of the study: not clearly stated
2. Sampling strategies: How were the participants identified?
3. Income measurement: Applicability in communities where majority are employed in the informal sector
4. It is not clear how the multivariate analysis was done
5. I didn’t see any analysis with dichotomous outcome variable among tables presented in the document
6. Relevant graphs should be part of main document (choose most relevant)
7. Tables on Multivariate analysis need to be included
8. The authors failed to discuss the strength and limitation of the study
9. # of abbreviations used in the document should be limited

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Needs some language corrections before being published

Statistical review: Yes, and I have assessed the statistics in my report.
