Reviewer’s report

**Title:** Russia-specific relative risks and their effects on the estimated alcohol-attributable burden of disease

**Version:** 5  **Date:** 27 April 2015

**Reviewer:** David Leon

**Reviewer's report:**

The authors have satisfactorily dealt with my last set of comments. My view is that this paper should be accepted without further revision. It is now considerably more transparent in its methods, and is more balanced in its account of the strengths and weaknesses of the data used and conclusions drawn.
