Reviewer's report

Title: Parental attitudes towards male human papillomavirus vaccination: a pan-European cross-sectional survey

Version: 5 Date: 18 October 2014

Reviewer: Maria Giuliana Solinas

Reviewer's report:

The topic is of great interest, but methodology (including the design and the analysis) shows several pitfalls. It is unclear the type of sampling they used, although the authors indicate that the sample is representative. The assumption behind the computation of the sample size seem not appropriate and are not clear detailed.

In the Methods section, the authors explain that they have used the Factorial Correspondence analysis, but in the results section the output is not showed. Therefore, I suggest that the paper connot be accepted in its present form.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
