Reviewer’s report

Title: Can opportunities be enhanced for vaccinating children in home visiting programs? A population-based cohort study.

Version: 2 Date: 31 March 2015

Reviewer: Rosa Prato

Reviewer’s report:

Minor Essential Revisions

The study has public health relevance. However, there are some minor concerns about the authors’ approach to arranging the MS and presenting the results. Specific comments follow.

Introduction

Aim of the study: it would be useful to provide a brief description of the available vaccination coverage data.

The first three lines of the last paragraph sound more as a comment than as an aim.

Results

First paragraph: it’s quite strange reading some citations here.

Few data are reported, I don’t like so much to read that most findings are in the tables.

Again a strange way to arrange the MS, in the last paragraph the authors made some comments.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:
