Reviewer’s report

Title: The influence of family history of Hypertension on disease prevalence and associated metabolic risk factors among Sri Lankan adults

Version: 2   Date: 31 March 2015

Reviewer: alfonso otero gonzalez

Reviewer’s report:

The work done by Ranasinghe P et al is very interesting and very useful clinically.

Two considerations:
1.- In the pathogenesis of hypertension, I think you should include the role of Uric Acid and oxidative stress as an important element in the genesis of hereditary hypertension

2.- The HTA was more prevalent in rural or urban environment.

The work seems very appropriate for publication
