Reviewer's report

Title: Factors associated with sexual risk behaviors with non-steady partners and lack of recent HIV testing among German men who have sex with men in steady relationships: results from a cross-sectional internet survey

Version: 1 Date: 6 June 2015

Reviewer: Daniel Chemtob

Reviewer's report:

Minor essential revisions:
The objectives are not always clearly defined.
The methodology used by the authors is legitimate and acceptable.
Some results which are not enabling to differentiate between two possible answers may not be of great interest (e.g. in line 219, it is noted that 9.7% are immigrants or being the child of immigrants). It may be more useful to have only one possible answer.
Some results should be re-checked and quoted consistently in the separate places: for example, in lines 229 and 358, the number of persons from high risk groups who believe themselves to be at low HIV risk are reported differently (55.35% and 57.2%, respectively).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.

Declaration of competing interests:
