Reviewer's report

Title: Multimorbidity and the inequalities of global ageing: a cross-sectional study of 28 countries using the World Health Surveys

Version: 3  Date: 25 June 2015
Reviewer: Carla Storr

Reviewer's report:

The authors have been responsive in addressing the reviewers concerns.

There are two remaining minor essential revisions I would suggest:
1) The label mean world prevalence estimate is misleading as it is 'worldly' for mainly low-middle income countries as only one HIC was included in this study. Perhaps change the phrase to be mean world prevalence for LMIC

2) The y axis (what the lines represent) in Figure 2 need some indication of what they represent. Perhaps include a statement that indicates increasing color intensity corresponds to increasing education levels.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.
