Title: Factors that lead to the use of crack cocaine in combination with marijuana in Brazil: a qualitative study

Version: 2 Date: 2 January 2015

Reviewer: Adriana Campa

Reviewer's report:

Review: This is an important article, with a fresh and great insight in the reasons for using marijuana when dependent on crack-cocaine. It is well written and clearly presented. I recommend it for publication. The article is timely because the Brazilian government is considering the legalization of medical marijuana, and it can become one more tool in reducing the adverse effects of crack-cocaine use. Please, on line 112, the parenthesis is not closed.
