Reviewer's report

Title: Self-perceived psychological stress is associated with parameters of adiposity and subclinical atherosclerosis disease in Mexican population. The GEA Study.

Version: 1 Date: 13 June 2014

Reviewer: Carmine Pizzi

Reviewer's report:

Major Compulsory Revisions
Why did not the authors evaluate the psychological status by standerdized questionnaire?
The authors should also give the treatment. Did the treatment impact in the IMT?
The authors should give some details about the machine which they have used to examine the patients.
How did they calculate IMT?

Level of interest: An article of limited interest

Quality of written English: Not suitable for publication unless extensively edited

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
