Reviewer's report

**Title:** Assessment of water, sanitation, and hygiene practice and associated factors in a Buruli ulcer-endemic district in Benin (West Africa)

**Version:** 2  **Date:** 30 May 2015

**Reviewer:** Kebede Deribe

**Reviewer's report:**

The manuscript has significant improved, the authors have addressed most of my comments adequately. I have few comments, under the results of in-depth interview there it is indicated that “The lack of infrastructure, however, forces 53.3% of the households to use this water” (Page 8, lines 207-208). Is the 53.3% from the survey results, if yes, I would recommend to present here only results of the qualitative part and triangulate in the discussion part of the manuscript. Similarly in the next few paragraphs there is mixing of the quantitative and qualitative parts.

Figure 1: Map of the commune of Lalo is duplicate in the document.

Line 486 ‘Table N°2’: should read “Table 2”

**Level of interest:** An article whose findings are important to those with closely related research interests

**Quality of written English:** Acceptable

**Statistical review:** No, the manuscript does not need to be seen by a statistician.
