Title: Familial determinants of current smoking among adolescents of Lithuania: a cross-sectional survey 2014

Version: 4 Date: 27 June 2015

Reviewer: Syeda Kanwal Kanwal

Reviewer's report:

Minor Essential Revisions:

1. Regarding Comment # 1 in my previous report, please add the text in strengths and limitations section of the paper as follows:
   The study did not include information related to parents' and peers' cigarette smoking, or second hand smoke exposure at home or other places; which may play an important role in determining current smoking of young people, as the survey did not include related information. Nevertheless, our study focused on the specific psychosocial familial determinants and their impact on young people smoking risk, and results provide baseline information in given context, which provide directions for improved tobacco control efforts intervening at family level.

2. "Significant relationships are bolded", rephrase footnote in Tables 2,3 and 4 as: Significant relationships are provided in bold. For table 4 footnote, rephrase as: Results of all significant predictors are provided.

Level of interest: An article of importance in its field

Quality of written English: Acceptable

Statistical review: Yes, and I have assessed the statistics in my report.
