It is not true that there are no computer tailored interventions in the literature.

There are two studies that have used computer prompts

Pedersen SJ, Cooley PD, Mainsbridge C. An e-health intervention designed to increase workday energy expenditure by reducing prolonged occupational sitting habits. Work 2014;49(2):289-95.

and one study on e-newsletter

However these studies are not interactive web based interventions that the authors are trying to access feasibility and acceptability.

Level of interest: An article of outstanding merit and interest in its field

Quality of written English: Acceptable

Statistical review: Yes, but I do not feel adequately qualified to assess the statistics.
