Reviewer's report

Title: Comparison of IgG against plastic resin in workers with and without chemical dermatitis

Version: 3 Date: 11 May 2015

Reviewer: Lygia Therese Budnik

Reviewer's report:

The authors didn't respond to my concerns and suggestions!! The manuscript is still too week for publications.

The major concern is the most important data shown in only one figure with a very poor quality. The authors should improve the quality of this picture. My impression is that this is the only figure/picture the authors have (assuming that the best quality would usually be send for submission). Also there is a need for at least a minimum on statistical evaluation for the data shown in this figure (based on several measurements).

Level of interest: An article whose findings are important to those with closely related research interests

Quality of written English: Acceptable

Statistical review: No, the manuscript does not need to be seen by a statistician.

Declaration of competing interests:

I have no conflict of interests.
