Reviewer's report

Title: Geographic variation in the choice of adjuvant treatments for women diagnosed with screen-detected breast cancer in Queensland

Version: 2 Date: 24 April 2015

Reviewer: Aamir Ahmad

Reviewer's report:

This is an interesting first report on the shared spatial disparities of women's intention to use adjuvant therapy after breast cancer diagnosis. In my judgment, the manuscript is well written and presented.

I suggest that the authors discuss British Columbia and the US studies (mentioned in paragraph 5 of the Discussion) in little more detail.

Finally, I urge the authors to look into the following few publications and see if these can help their Discussion -

a) A review of systematic reviews of the cost-effectiveness of hormone therapy, chemotherapy, and targeted therapy for breast cancer.

d) Discrepancies between ESMO and NCCN breast cancer guidelines: An appraisal.

Level of interest: An article of importance in its field

Quality of written English: Acceptable
Statistical review: No, the manuscript does not need to be seen by a statistician.
