Title: Development of a measurement approach to assess time children participate in outdoor active play, organized sport, active travel, and curriculum-based physical activity

Version: 0 Date: 26 Jan 2018

Reviewer: Maria Paula Santos

Reviewer's report:

The manuscript entitled "Development of a measurement approach to assess time children participate in outdoor active play, organized sport, active travel and curriculum-based physical activity" is a very interesting paper that describes very well the methodological approach used for all measurements used. This manuscript could be an important reference in the field since it pointed out a new direction for integrated measures for physical activity in different contexts. In my opinion, the generation of algorithms were well explained, as well the other parts of the methods, but further utilization of the same approach could benefit from shared syntaxes within physical activity researchers to extend the application of this kind of approach.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
