Title: Factors affecting Tobacco Smoking in Ethiopia: Evidence from the Demographic and Health Surveys

Version: 1 Date: 27 May 2019

Reviewer's report:

I appreciate the diligence of the authors in addressing the issues that I raised earlier and where they did not make a change, provided scientific rationale for not doing that. Still, I will suggest the following:

1. Typically, the conclusion section is a brief paragraph or two that illuminates the key findings and takeaway message of the study; however, the authors have written such a long conclusion that includes the implication(s) of the study. I will suggest that they should incorporate the implication(s) into the discussion section so that the conclusion will be limited to what conclusion is meant to serve, i.e., highlight key findings and provide takeaway message.

2. The titles of the table should include the sample size, e.g., Table X: ...... (N=....)

3. Please include caption explaining the figures immediately below each figure.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.
