The topic of knowledge, attitude and peer influences among adolescents using maternal health services is important. The topic is nicely introduced, Result presentation gets better and better and the discussion is now structured carefully. The authors considered all reviewer comments carefully.

Some minor comments remain:
Please use the word frequencies and percentages in all tables where it is presented.

In table 7: P-value needs to be explained. Which kind of test statistics was done? To reduce the number of tables, I can also suggest deleting table 7. The results of the relevant chi square test statistics can also be named in the result text without having the 4 other irrelevant test statistics presented in table 7.

I do not have further comments. Good work.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.
