Reviewer's report

Title: Driving Force of Condomless Sex after Online Intervention among Chinese Men Who Have Sex with Men

Version: 0 Date: 22 Dec 2018

Reviewer: Bo Qu

Reviewer's report:

I very much enjoyed reading this manuscript. It is great to see more research coming out on the high-risk behavior among MSM. I have mostly minor feedback (below).

1. Consider referencing MSM as percentage of total population - very small portion of the population accounting for such a large portion of HIV incidence makes for a strong point here.

2. I may suggest that in the background, some literature review on the associated factors of condomless sex after intervention should be added.

3. Please add the statistics (t-value, chi-square value ...) in the table 2.

4. In this study, multivariable logistic regressions were used to further identify the potential factors associated with condomless sex. It may be confused that why only the factors in the table 3 were included in the regression. The identity of students and sexual identity were also the associated factor as shown in table 2. Please add all the significant statistically factors in table 2 into the regression model.

5. The sample is largely comprised of people of younger age, limiting the generalisability of the findings.

6. The authors upload the links of original two videos in the manuscript. Unfortunately, I can only get access to the first video. But I can't get the intervention information from the video. Please check that.
Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
