Title: Factors associated with tungiasis among primary school children: a cross-sectional study in a rural District in Rwanda

Version: 0 Date: 01 May 2019

Reviewer: Louise Makau-Barasa

Reviewer's report:

Overall the study focuses on an under researched neglected disease and adds to the dearth of information on the disease.

The manuscript is well written. Research methods are clearly explained and justified. The sample selection and size is clearly articulated and results are presented in a cohesive manner.

Unless confidentiality concerns are in place, indicating the name of the district where the study was conducted would be helpful for the larger public health audience.
