Reviewer’s report

Title: Income Inequality and Mass Shootings in the United States

Version: 0 Date: 10 Mar 2019

Reviewer: Mosiur Rahman

Reviewer’s report:

Overall, this is an interesting paper and highly publishable, which showed a connection between income inequality and mass shootings across counties in the United States. The paper is logically ordered and addresses the aims that it sets out. The methods are well described and appropriate to this type of study and the authors have adhered to the relevant standards for reporting and data presentation. The discussion appears to refer appropriately to the results and other available literature. The only minor correction I feel:

To discuss many counterintuitive findings such as the relationship between population density, minority population and graduation rate with mass shootings, as many of the findings are significant

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics
