Reviewer’s report

Title: Analysis of factors influencing the frequency of primary care visits among diabetic patients in two provinces in China

Version: 1 Date: 19 Jul 2019

Reviewer: Yanbing Zeng

Reviewer's report:

The authors have made several changes in response to comments made earlier. The article is now more concise and logical. Before publication, some essential revisions need to be done.

1. Page7 line8, the authors report Table4 with single one correlation, this makes no sense. The urban-rural differences or similarities are not clear.

2. Please add a supplementary file, presenting the multivariate analysis with all variables in your study design.

3. I recommend do through a language correction as some sentences are hard to read. For instance, ‘The ministry of health and primary health care providers should develop behavior change and weight management tools and services that are affordable, easy to use and culturally appropriate to help diabetes patients to self-manage their condition effectively.’ What does culturally appropriate mean?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
Please indicate the quality of language in the manuscript:
