Reviewer’s report

Title: Lymphangioleiomyomatosis, multifocal micronodular pneumocyte hyperplasia, and sarcoidosis: more pathological findings in the same chest CT, or a single pathological pathway?

Version: 1 Date: 31 May 2017

Reviewer: Maneesh Bhargava

Reviewer's report:

This is a revised manuscript and the authors have modified parts of the manuscript. There are some concerns that need to be addressed to provide readers an idea about the approach to evaluation of a case with suspected sarcoidosis.

Please include the workup performed for evaluation of alternate etiology and also the extent of sarcoidosis. If an EKG was done please describe the findings. Was advanced cardiac imaging needed? Also for ocular disease please provide the details of exam. Were fungal serologies done. Any special stains on histology?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Unable to assess

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Unable to assess

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
