Reviewer’s report

Title: Miliary tuberculosis with co-existing pulmonary cryptococcosis in non-HIV patient without underlying diseases: a case report

Version: 0 Date: 22 Sep 2017

Reviewer: Denise Silva

Reviewer's report:

The authors should consider the possibility that the patient had only one disease, pulmonary cryptococcosis.

Pulmonary cryptococcosis also causes granulomatous inflammation and chest CT can also show military pattern in these cases.

Also, PCR of gastric aspirate was positive for Mycobacterium tuberculosis; however the positive TB PCR may indicate the presence of non-viable AFB, particularly in patients with a history of tuberculosis in the past.

The authors should discuss it.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Yes

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

No
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

I am able to assess the statistics

Quality of written English
