Reviewer’s report

Title: Associations of AMP and adenosine induced dyspnea sensation to large and small airways dysfunction in asthma

Version: 0 Date: 08 Sep 2018

Reviewer: Reviewer 2

Reviewer’s report:

PEER REVIEWER COMMENTS: To view the full report from the academic peer reviewer, please see the attached file.

REVIEWER COMMENTS FROM REPORT: It is an interesting and well conducted study. It joins classical routinely used indexes of flow resistance to more sophisticated evaluation of segmental respiratory resistance using IOS. The main drawback is that authors make the assumption that adenosine is mainly delivered to the small airways, yet they have no proof of this. Further, as the authors hypothesize a different pathway for dyspnea by stimulation with ATP other than broncho-constriction of large airways, I suggest to hypothesize afferents from interstitial J receptors activated by subthreshold interstitial edema.

REQUESTED REVISIONS:

I suggest the authors include a short discussion concerning sensitive afferents from the lung interstitial space in case of dyspnea elicited by ADP stimulation.

ADDITIONAL REQUESTS/SUGGESTIONS:

Pleases see comments above.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

No

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

No

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.

Not relevant to this manuscript

Quality of written English
Please indicate the quality of language in the manuscript:

Declaration of competing interests
Please complete a declaration of competing interests, considering the following questions:

1. Have you in the past five years received reimbursements, fees, funding, or salary from an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

2. Do you hold any stocks or shares in an organisation that may in any way gain or lose financially from the publication of this manuscript, either now or in the future?

3. Do you hold or are you currently applying for any patents relating to the content of the manuscript?

4. Have you received reimbursements, fees, funding, or salary from an organization that holds or has applied for patents relating to the content of the manuscript?

5. Do you have any other financial competing interests?

6. Do you have any non-financial competing interests in relation to this paper?

If you can answer no to all of the above, write 'I declare that I have no competing interests' below. If your reply is yes to any, please give details below.
