Reviewer’s report

Title: The impact of early diagnosis on the prognosis of extranodal NK/T-cell lymphoma with massive lung involvement: A case report

Version: 1 Date: 31 Jan 2018

Reviewer: Armin Rashidi

Reviewer's report:

This is an interesting case of NK/T cell lymphoma with lung involvement, who achieved a complete remission with intensive chemotherapy and was consolidated using allogeneic HCT. It would be informative to have the following:

1. SUV of lesions

2. Higher power H&E

3. More detail on transplant: Precise conditioning regimen including TBI dose, single or double cord, GVHD prophylaxis, and major events after transplant.

4. An overview of outcomes of allo-HCT for extranodal NK/T lymphomas regardless of lung involvement. This might require including a lymphoma transplanter as an author to provide a transplant perspective. The reader ideally wants to know whether allo-HCT is a good option or not. A single case report is nice, but not very informative unless supplemented by more focused discussion.

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.

Yes
Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
