I have made a few suggestions that would improve the quality of this manuscript:

Please replace 'performed' with 'conducted' when referring to the interviews.

Were the interviews conducted face to face and where were they conducted?

When providing illustrative quotes insert more information in brackets (age, sex, country of origin etc) as this provides more context to the point being made.

Can you also provide a statement with regard to achieving data saturation?

It would be good to see more quotes about doctors knowledge and patients trust in the doctors?

Was there any data in the interviews regarding preventative use of the inhaler and use to relieve symptoms - did participants understand the difference in usage and which inhaler to use?

Are the methods appropriate and well described?
If not, please specify what is required in your comments to the authors.

Yes

Does the work include the necessary controls?
If not, please specify which controls are required in your comments to the authors.

Unable to assess

Are the conclusions drawn adequately supported by the data shown?
If not, please explain in your comments to the authors.
Yes

**Are you able to assess any statistics in the manuscript or would you recommend an additional statistical review?**
If an additional statistical review is recommended, please specify what aspects require further assessment in your comments to the editors.
